

SAURABH TIWARI

Full Stack Developer | AI Software Engineer

+91-9580250371 | saurabhtiwari848586@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Kalinga Institute of Industrial Technology (KIIT), Bhubaneswar Bhubaneswar, India
Bachelor of Technology (B.Tech) in Computer Science Engineering — Expected Graduation: 2027

TECHNICAL SKILLS

Programming: Python, C++ (DSA), JavaScript, TypeScript

AI & LLM: LangChain, RAG, Prompt Engineering, LLM Applications, Google Gemini API

Backend: FastAPI, Node.js, Express.js, REST APIs, JWT Authentication, Rate Limiting

Databases: PostgreSQL, MongoDB, MySQL

Cloud & DevOps: Docker, Git

Data: Pandas, NumPy, Statistical Analysis

PROJECTS

DocPilot – Document-Intelligence RAG Platform 2026
Python, FastAPI, LangChain, Google Gemini API, PostgreSQL, Docker

- Built a document-intelligence RAG platform using FastAPI, LangChain, and Gemini, enabling robust PDF, DOCX, and TXT ingestion, semantic retrieval, and source-grounded LLM responses.
- Engineered an end-to-end document processing pipeline encompassing text extraction, intelligent chunking, embedding generation, and high-performance vector retrieval utilizing FAISS and PostgreSQL pgvector.
- Implemented history-aware retrieval chains, reusable prompt templates, and per-user conversation memory accessible via scalable REST APIs.
- Containerized the architecture with Docker and integrated AWS S3 for configurable cloud storage, alongside secure JWT-based multi-user authentication with isolated document contexts.

GitHub: github.com/saurabhtiwari021/DocPilot

CampusKart – Campus Marketplace Platform 2026
React, Node.js, MongoDB, Socket.io, JWT, Cloudinary, Tailwind CSS

- Built a MERN marketplace enabling students to buy, sell, rent, and donate items — architecting 9 RESTful API resource modules and shipping 11 end-to-end product features (listings, chat, wishlist, reviews, admin tooling) behind a React frontend.
- Implemented JWT-based authentication restricted to a single verified campus email domain and built a real-time messaging system with Socket.io spanning 6 live events (chat, typing indicators, seen receipts) for concurrent users.
- Engineered full-text relevance search with 4 server-side filter dimensions (category, type, condition, price) and a live notification system covering 3 event types (messages, wishlist saves, reviews).
- Designed an automated fraud-detection rule for underpriced listings, a date-range rental calendar booking flow, and an admin panel with Cloudinary-powered multi-image upload.

CERTIFICATIONS

Data Engineering — ExcelR, in association with KIIT University Feb – Mar 2026
90-hour professional training program; Certificate ID: 55872/ExcelR [Certificate](#)

EXTRACURRICULAR ACTIVITIES

- Social Activist — TPH Society, 2025 – present
- Student Volunteer — Bakul Foundation, 2025
